Our Story

Ferti-Organic was launched in 2010 to satisfy the growing demand for the natural raw materials and insect repellents that make organic growing possible.

We pride ourselves on delivering materials approved and listed organic by the California Department of Food and Agriculture (CDFA), by the Oregon Department of Agriculture, as well as by the Organic Materials Review Institute (OMRI), an international nonprofit organization that determines which input products are allowed for use in organic production and processing. Ferti-Organic products are OMRI Listed® products allowed for use in certified organic operations under the USDA National Organic Program.

Ferti-Organic customers include formulators and farmers large and small across all 50 US states and Canada who choose our products for their quality and affordable prices as well as for our company’s commitment to quick and attentive customer service.

Ferti-Organic is part of Brownsville, TX-based MYCSA Group, a leading global provider of organic bulk fertilizers, raw materials, solutions and other products for organic growers and the organic agriculture industry.
Our Home

Ferti-Organic ships directly to your door. We ship to the US and Canada, in a timely manner with options for customized packaging and labeling.

We'll stay in contact with you from the time you order until our product arrives at your door to ensure you're satisfied.
Our Products:

Ferti-Nitro Plus Plant Nitrogen is a biofertilizer in powder, produced enzymatically and derived from soy protein, with a guaranteed minimum of 13.62% of plant-available nitrogen.

Ferti-Nitro Plus Plant Nitrogen contains amino acids and short polypeptides readily available for nutrient uptake and absorption. It is highly recommended for organic agriculture as it is rich in protein hydrolysates, which stimulate carbon and nitrogen metabolism and increase nitrogen assimilation in plants.

It is suitable for application on field crops, potting soil, vegetable and flower gardens, orchards and turf grass.

BENEFITS:

- Improves nitrogen uptake
- Enhances tolerance to biotic and abiotic stress
- Stimulates plant growth
- Can be applied in leaves as foliar fertilizer
- Certified CDFA and OMRI listed for use in organic agriculture
- Approved for use on any CCOF farm

Guaranteed Analysis

Total Nitrogen (N): 13.62%
Water Soluble Nitrogen 13.51%
Water Insoluble Nitrogen 0.11%

Derived from hydrolyzed soybean protein

Packaging:

50 lb sacks/boxes, 2,200 lb/pallets or 1,225 lb super sacks.
Ferti-Amino is a water-soluble biofertilizer in powder, derived from soy protein, with a guaranteed minimum of 15% plant-available nitrogen and little to no chloride or sodium.

Ferti-Amino contains amino acids and short polypeptides readily available for nutrient uptake and absorption. It is highly recommended for agriculture as it is rich in protein hydrolysates, which stimulate carbon and nitrogen metabolism and increase nitrogen assimilation in plants.

It is suitable for application on field crops, potting soil, vegetable and flower gardens, orchards and turf grass.

**BENEFITS:**
- Improves nitrogen uptake
- Enhances tolerance to biotic and abiotic stress
- Stimulates plant growth
- Can be applied in leaves as foliar fertilizer

**Packaging:** 50 lb bags/boxes, 2,200 lb pallets or 1,400 lb super sacks.
Soluble Seaweed Extract is extracted from fresh kelp (algae), through a very specialized process. It is 100% natural and widely used as organic in many places. It is natural, non-toxic, harmless and nonpolluting, and rich in microelements.

Soluble Seaweed Extract is suitable for all crops and applications including field crops, potting soil, vegetable, flower gardens, orchards and turf grass. Promotes balanced growth of crops, boosts the capacity of immunity and resistance, improves crop quality and increases yield.

**BENEFITS:**
- It improves stressed plants affected by low and high temperatures or diseases
- It’s N and P content helps cell elongation and better foliar development.
- Increases the fixation of Nitrogen in the air.
- Better fruit development.
- Improves the soil, as moisture retainer.
- Trace elements are increased in plants to improve their metabolism.

**GUARANTEED ANALYSIS**

| Component          | Content  
|--------------------|----------
| Soluble Potash (K2O) | 14%      

*Derived from Ascophyllum nodosum*

**Packaging:** 50 lb sacks/boxes, 2,200 lb pallets or 1,400 lb super sacks.
Soluble Seaweed Extract Plus is extracted from fresh kelp (algae), through a very specialized process. It is 100% natural and widely used as organic in many places. It is natural, non-toxic, harmless and nonpolluting, and rich in microelements.

Soluble Seaweed Extract Plus is suitable for all crops and applications including field crops, potting soil, vegetable, flower gardens, orchards and turf grass. Promotes balanced growth of crops, boosts the capacity of immunity and resistance, improves crop quality and increases yield.

**BENEFITS:**
- It improves stressed plants affected by low and high temperatures or diseases
- It’s N and P content helps cell elongation and better foliar development.
- Increases the fixation of Nitrogen in the air.
- Better fruit development.
- Improves the soil, as moisture retainer.
- Trace elements are increased in plants to improve their metabolism.

Soluble Humic Acid 80 is a dark black humate derived from leonardite with at least 80% humate content, 99% solubility, and a great natural trace nutrient chelater. It’s long lasting and fast acting.

Soluble Humic Acid 80 offers a greater availability of Potassium, Nitrogen and Phosphorus, as well as better absorption of Calcium and Magnesium, as well as Iron, Manganese, Zinc, and Copper as chelates.

Its anti-compaction agents make it ideal for use in soils with very high calcium and in breaking up clay soils. By nature, it bonds with calcium instantly and releases other nutrients to the plant.

**BENEFITS:**
- Increases organic matter of soil
- Improves crop respiration and photosynthesis
- Slows decomposition to increase the release of potassium
- Enhances water holding capacity of soil
- Improves soil and reduces its erosion
- Regulates the release of nutrients
- Improves the quality of crops
- Improves efficacy of Herbicide
- Improves the efficiency of fertilizer

Soluble Humic Acid is the potassium salt of humic acid also known as potassium humate. It has all the characteristics of humic acids, with the additional benefits of solubility without precipitation or solid separation after dilutions are made.

It has a minimum of 70% humate matter, including fulvic acids which remain in the solution as long as necessary. In soil, humic substances play key roles in many soil and sand plants such as controlling nutrient availability, carbon and oxygen exchange between the soil and the atmosphere, as well as transforming and transporting toxic chemicals.

In addition to increasing overall root growth at early stages of plant development, humic acids have also been found to increase crop yield and/or quality in some studies involving full-season plant growth in greenhouses and fields.

**BENEFITS:**
- Penetrates plant cell membranes and walls
- Resists high-ion water
- Dissolves quickly with, its insoluble matter being less than 1%
- Increases vitamins and sugar

* Available in California as Ferti-Humic

**Packaging:** 50 lb bags/boxes, 2,200 lb pallets or 1,400 lb super sacks.
**Ferti-Fulvic Plus** contains our highest concentration of Fulvic Acid (90%). *Ferti-Fulvic Plus* is a plant biostimulant with diverse substances to enhance plant growth. Fulvic acids are soluble in both alkali and acid media and are low in molecular weight. Given their small molecular size, fulvic acids can pass through the micropores of biological membranes.

Fulvic acids have greater total acidity, greater numbers of carboxyl groups, and higher absorption and cation exchange capacities. Fulvic acids chelate nutrients such as iron and move them and other micronutrients through membranes.

Humic and fulvic acids can interact with soil nutrients and elicit physiological responses in plants, contributing to plant growth and, in some cases, to better management of abiotic stresses.

**BENEFITS:**

- Enhances plant immunity for better stress management
- Accelerates the production of nucleic acids
- Enhances photosynthesis and respiration
- Prevents NPK nutrients from leaching
- Increases total cationic exchange and improves aeration
- Ferti-Fulvic Plus offers a higher concentration than Soluble Fulvic Acid

**Packaging:** 50 lb bags/boxes, 2,200 lb pallets or 1,225 lb super sacks.
Soluble Fulvic Acid is a concentrate derived from plant residues. This high-efficiency, multi-functional fertilizer is ideal to aid plant uptake of micronutrients.

Additionally, it is compatible with most liquid fertilizers, pesticides, herbicides and defoliants. If the desired combination has not been previously used, a compatibility test is highly recommended.

It possesses the same characteristics and benefits of Ferti-Fulvic but with a lower concentration (70%)

**BENEFITS:**
- Accelerates production of nucleic acids
- Enhances photosynthesis and respiration
- Increases cationic exchange

**Guaranteed Analysis**
- Fulvic Acid 69%
- Nitrogen 0.40%

* Available in California as Ferti-Humate

**Packaging:** 50 lb bags/boxes, 2,200 lb pallets or 1,225 lb super sacks.
Super K Fulvate is our traditional soluble fulvic acid plus K2O and microelements. It is a 100% soluble powder that provides plants all the essential elements while also offering all the advantages of fulvic acid.

Super K Fulvate activates enzymes regulating CO2 uptake and photosynthesis rate, thereby improving crop yield and quality.

The potassium (K) in Super K Fulvate regulates the opening and closing of stomata, the pores through which leaves exchange carbon dioxide, water, water vapor and oxygen with the atmosphere. Proper functioning of stomata is essential for water and nutrient transport and plant cooling.

**BENEFITS:**
- Increases root growth and improves drought resistance
- Activates many enzyme systems
- Maintains turgor
- Reduces water loss and wilting
- Produces grains rich in starches
- Helps retard crop diseases

Ferti-Corn Steep is a water-soluble fertilizer that can be applied directly, or it can be mixed with other liquid fertilizers, growth promoters (seaweed) or dry fertilizer, whether it is sprayed, irrigated, foliar or applied through soil.

Ferti-Corn Steep powder helps promote the natural growth of plants with nitrogen, phosphorous and potassium, it also contains micronutrients such as iron, sulfur and manganese, as well as amino acids and trace elements, which are completely non-toxic, harmless and pollution-free. It can also improve the structure and fertility of the soil, promote the activities of microorganisms and soil organisms, and the decomposition of nutrients in the soil in an effective and economic way.

**BENEFITS:**
- Easy to apply and mix
- Rich in organic matter and nutrients
- Compared with chemical fertilizers, it contains fast-acting nitrogen that plants can easily absorb
- It helps crops grow and improves the soil

---

**Guaranteed Analysis**

Nitrógeno total (N) 7%
Fósforo disponible (P2O5) 7.81%
Potasio soluble (K2O) 6.07%

**Packaging:** 50 lb bags/boxes, 2,200 lb pallets or 1,400 lb super sacks.
The agricultural use of microbial inoculants, also known as biofertilizers, has increased dramatically. Biofertilizers contain living microorganisms that, when applied to seeds, plant surfaces or soils, promote growth by increasing nutrient supply, root biomass, root area and nutrient uptake, acting as a complement to mineral fertilizers.

**Mycorrhizae Ultrafine Endo** is a mycorrhizal inoculum powder comprising four scientifically formulated endomycorrhizal fungi propagules (Glomus intraradices, Glomus mosseae, Glomus aggregatum, and Glomus etunicatum). It is a wettable powder with a particle size under 300 microns, ideal for "water in" or "spray" applications.

**BENEFITS:**

- Increases resistance to pathogens
- Enriches soil nutrients and aerates
- Induces growth of beneficial flora
- Slows down the process of nitrogenous compounds like ammonia

**Ingredients**

Beneficial endomycorrhizal propagules on an expanded clay carrier beneficial for plant growth:

Glomus intraradices, G. mosseae, G. aggregatum, G. etunicatum: 130,000 propagules/lb.
The agricultural use of microbial inoculants, also known as biofertilizers, has increased dramatically. **Packaging:** 10, 20 or 50 lb bags.
Native to India, Karanja Oil is cold-pressed and double-filtered from the seeds of the Pongam Tree, also known as the Karanja Tree (Pongamia glabra).

Karanja Oil has similar insecticidal properties to Neem Oil and acts against a number of insects and other pests.

With a mild and versatile aroma, it acts as an acaricide and insecticide. Karanja Oil also has nitrification inhibitory properties.

Karanja Oil contains natural plant growth-stimulating ingredients, primarily axins, improving soil texture and promoting vegetative growth, plant health and fruit yields.

**BENEFITS:**
- Ideal for soil-based insect control
- Prevents fungus and help plants recover from it
- Prevents some bacterial diseases
- Lasts longer on plants than chemical insecticides
- Ideal replacement for Neem Oil in areas where Azadirachtin is not allowed
- Can be mixed in equal parts with Neem Oil to widen insect control

**Guaranteed Analysis**

Karanja Oil

Karanja Oil 100%

**Karajin Content:** 20,000ppm

Derived from pongamia glabra (karanja) seed oil

**FIND A DISTRIBUTOR**

Packaging: 5 gal jugs or 55 gal drums.
The main ingredient in Cedar Guard is cedar oil, it contains such chemically-related compounds as cedrol and cedrene.

Cedar Guard works on pheromone-driven insects by disrupting their octopamine neuroreceptors, thereby stifling their ability to detect food and mates and reproduce.

It may be used as a pest lure, repellent, as part of a trap or for disease control.

**BENEFITS:**
- Disrupts the egg cycles of non-beneficial insects
- Strengthens barriers for re-entry
- Is compatible with most fertilizers
