

Ferti-Organic

Soluble Humic Acid is potassium salt of the humic acid and also known as potassium humate. It has all the characteristics of humic acid and very similar to fulvic acid. However, it has not the disadvantages of traditional humic acid like insolubility, precipitation and/or solid separation after dilution is made.

It has a minimum of 70% humate matter including fulvic acids which remain in the solution as long as necessary. The shelf life is indefinite with no fermentation or occurrence of precipitation.

Soluble Humic Acid

Guaranteed Analysis

Humic Acid 60%
Potash (K2O) 7%

Derived from leonardite mineraloide

Guaranteed through Calif HA4/JC analysis method
in USA authorized laboratories.

GENERAL APPLICATION RATE

Foliar: 1-7 lbs per acre
.5-3 kg per acre
Drip irrigation: 4-9 lbs per acre
2-4 kg per acre

Disposal may be on-site or at an approved waste disposal facility (please see SDS sheet).

Store in a cool, dry dark place

Net content 50 lbs /22.68 kg
